# Protector

## DESCRIPTION

As Ultra Chem Labs progresses further into the discovery of new technologies, an outstanding addition to carpet cleaning management has been discovered in the form of 'Protector'. 'Protector' instills a revolutionary soil and stain resistant protective shield around within fabrics and fibers which in turn extends the life and increases the aesthetic beauty of the fabrics and fibers for extended periods of time. This protective shield is more effective than Teflon based products and other conventional fluorocarbon fabric protectors which stiffen the fabric or alters color. Despite being damp

or dry, 'Protector' uniformly coats the three dimensions of the fibers and fabrics which allows fibers to "breathe" and provides easy spot blot off management with a conventional damp sponge or cloth. In terms of application, 'Protector' does not require specific training or special equipment, and unused solution can be conveniently placed in easy to use spray equipment for repeated use. Overall, 'Protector' is a high quality carpet management product that removes the guess work for your protective carpet cleaning needs.

## DIRECTIONS

Use as is without dilution.

This product meets Terrachoice's Ecologo environmental standard for industrial and institutional cleaners based on its reduced human and aquatic toxicity and reduced smog production potential.
